Basic Sim Operation.....2
Learning Goals.....5

Basic Sim Operation

- pH slider
  - affects the number of speck-molecules shown in the beaker and the bars in the bar chart
  - does not affect the label tag (see "choose a liquid")
- bar charts
  - radio buttons for "concentration" and "number of moles"
  - concentration
    - mol/L bars of both OH and H3O are drag-able, and tied to the pH slider
  - number of moles
    - all three bars are drag-able
    - changing the OH and H3O bars moves the pH slider
    - changing the H2O slider turns on the faucet/drain (for increasing/decreasing the bar height) to change volume in beaker
- faucet and drain
  - cannot fill above 1 liter
- Choose a liquid
  - when a new liquid is chosen, the beaker liquid disappears and the faucet turns on to fill with the new liquid
  - a label tag appears on the pH slider to indicate the pH of the current and previous liquids chosen
- Number of Molecules
  - continuous display of the number of the three molecules in the beaker

Learning Goals

Students will be able to use pH scale to write descriptions that demonstrate how to:

A. Determine if a solution is acidic or basic

B. Determine if a solution weak or strong by looking at the pH

C. Place acids or bases in relative order

D. Describe on a molecular scale, with illustrations, how the water equilibrium varies with pH

E. Determine concentration of hydroxide, hydronium and water at a given pH
